

**DEVELOPMENTAL DISABILITIES IN ADULT AGE:
GAIT ANALYSIS AND RESEARCH**

**Giorgio Albertini and Claudia Condoluci
IRCCS San Raffaele Pisana – Tosinvest
Rome, Italy**

Santiago, 13 march 2008

GAIT ANALYSIS IN ADULT AGE **Santiago, 13 march 2008**

LIVE EXPECTANCY IN DEVELOPMENTAL DIASABILITIES **IS CONTINUOSLY GROWING**

- **new clinical problems**
- **needed for new research**

GAIT ANALYSIS IN ADULT AGE

Santiago, 13
march 2008

IRCCS SAN RAFFAELE

**Child Adult Aging
Developmental Center**

GAIT ANALYSIS IN ADULT AGE
Santiago, 13
march 2008

■ Missions of the Center:

- Follow-up Developmental Disabilities in a Lifespan Perspective

GAIT ANALYSIS IN ADULT AGE
Santiago, 13
march 2008

- Missions of the Center (2):
 - clinical assistance and treatment of people with developmental disabilities.
 - research in the field of developmental disabilities

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

- **ACTIVITY**
 - About 500 in-patients with DD/year
 - About 2500 people with DD/year at the evaluation day-hospital
 - About 100 children for regular rehabilitation treatment

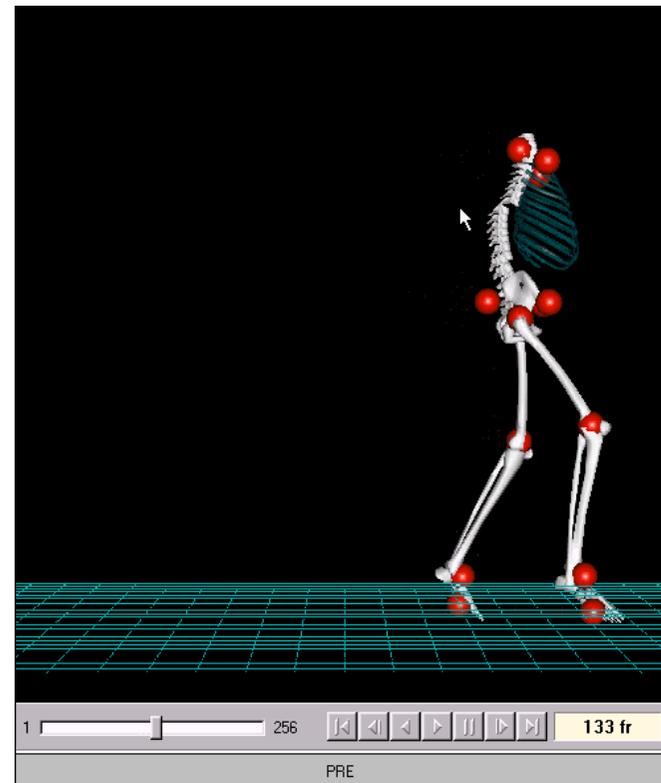

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

- The Department equipment (1)

- Gait lab

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

The Department equipment (2)

- Ophthalmologic lab
- Neurofisiology lab:
 - EEG, video EEG, poly-somnography
 - EMG
 - Evocated potentials:
 - visual,
 - uditory,
 - somesthetic

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

■ The Department equipment (3)

- 4 gyms for motor rehabilitation
- 3 rooms for speech-therapists
- 2 rooms for Psychologists
- 1 room for psychomotricist
- 1 room for informatic activity
- 14 PC in an intranet connection

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

- The San Raffaele equipment (1)
 - Echocardiography
 - Radiology:
 - X-ray
 - TC
 - MRI
 - Echography
 - Echo-doppler

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

■ The San Raffaele equipment (2)

- Audio-phonology lab
- Vestibology lab
- Idro-therapy
- Blood sample lab

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

- Theoretical model:
 - Cerebral plasticity
 - Systemic theories
 - Environment

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Cerebral plasticity

- The brain is genetically programmed for plasticity.

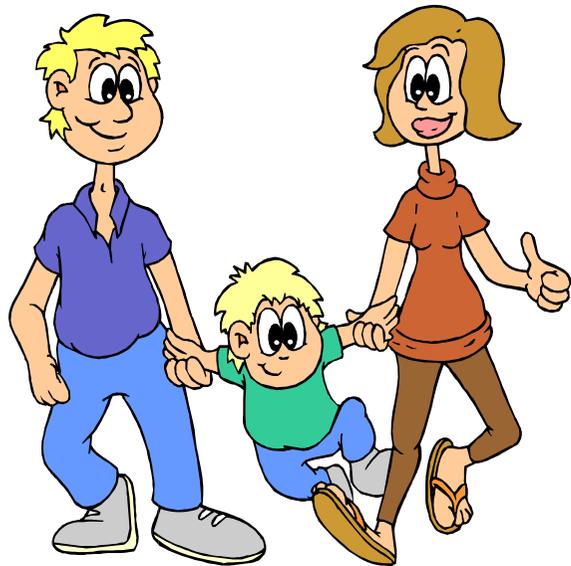

Cerebral plasticity

- It offers the child the possibility to develop lots of competences.
- It happens if environment and education, family and school, are creative, promote an active role of the child, offering a broad spectrum of experiences.

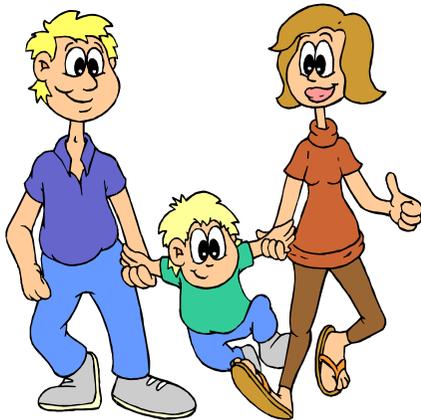

ENVIROMENT/BRAIN

**THE BRAIN IS GENETICALLY
PROGRAMMED FOR PLASTICITY**

BRAIN AS A PART OF A SYSTEM (Edelman)

BRAIN – DEVELOPMENT - ENVIRONMENT

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

- New scientific evidence led us to extend Edelman and Systemic Theories from infancy to the other phases of life (adolescence, youth, adult age, aging).

Developmental disabilities

- Intellectual disabilities (with-without etiological diagnosis)**
- Down syndrome**
- Cerebral palsy**
- Other genetic disorders**
- Behavioural problems**

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

First steps

- different approach according to diagnosis
- evaluation of the developmental level
- planning of treatment

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

Developmental
disabilities and health

The clinical protocols

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

The staff (1):

- pediatrician
- neurologist
- orthopedic
- physiatrist
- child neuropsychiatrist
- ophthalmologist
- dentistry
- orthoptist
- epileptologist
- dermatologist
- endocrinologist
- urologist
-

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

The staff (2):

- psychologists
- speech therapists
- motor therapists
- educators
- informatics
- music therapists
- developmental psycho-motricists
- bio-engineer
- molecular biologist

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

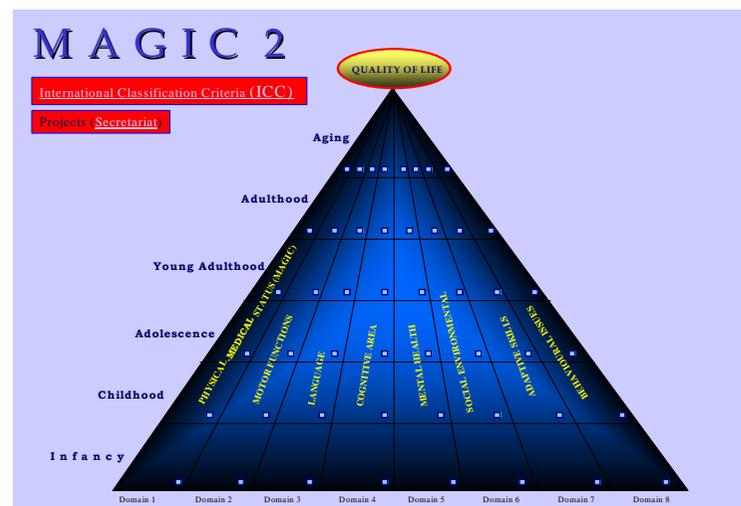

Research activity

- All the staff is involved in the research activity
- Clinical research
- Basic research

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

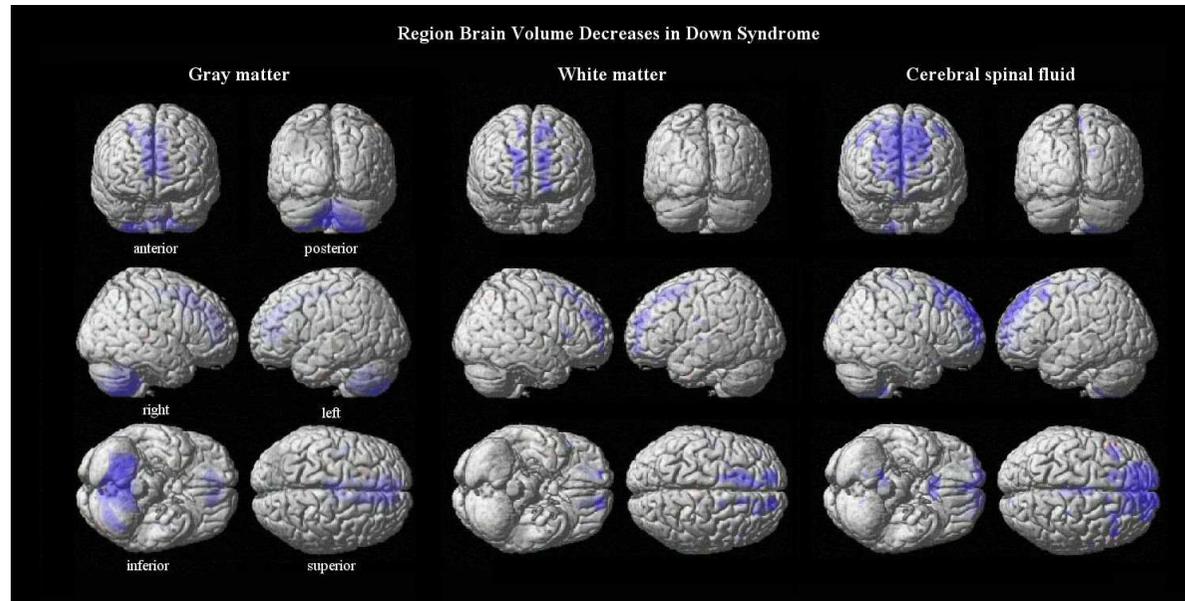

- Person centred evaluation in a multi-disciplinary, life span perspective: proposal of an experimental battery. From a problem centred clinical database to the person centred clinical database.

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

- Magnetic resonance imaging volumetry of the hippocampus, amygdala, and frontal lobe in Down syndrome patients

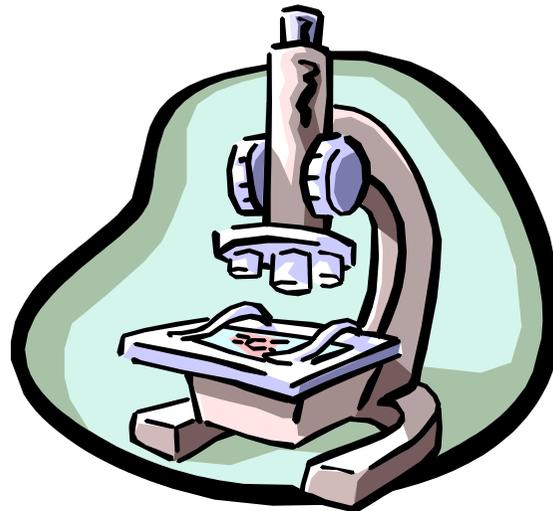

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

- Pharmacological profile of young adults and adults with Down syndrome and depression.

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

- Quality of life of persons with intellectual disabilities

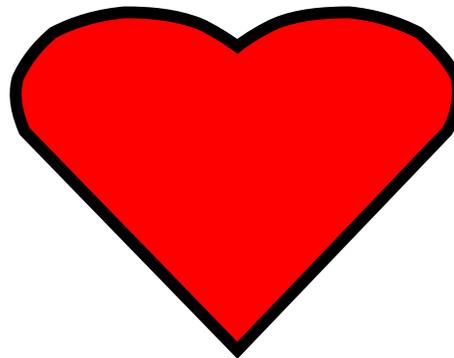

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

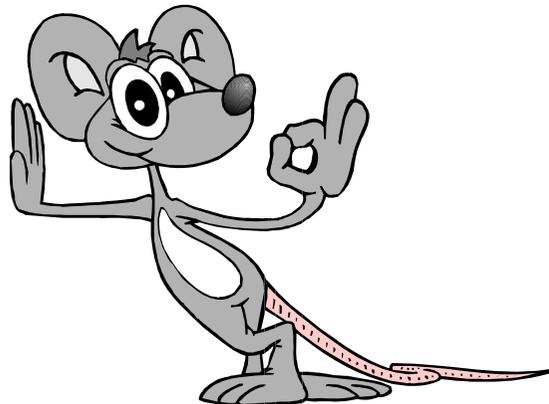

- Down syndrome and heart
 - Cardiovascular risk factors
 - Heart rate variability in adolescents and young adults

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

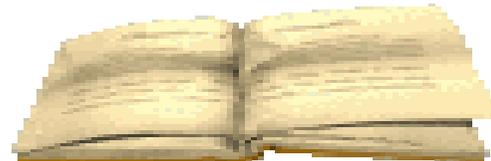

- Proteomic approach to mouse model of Down syndrome
- Relationship(s) between learning/memory deficits and developmental neuronal plasticity in a model of Down syndrome-the Ts65Dn mouse

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

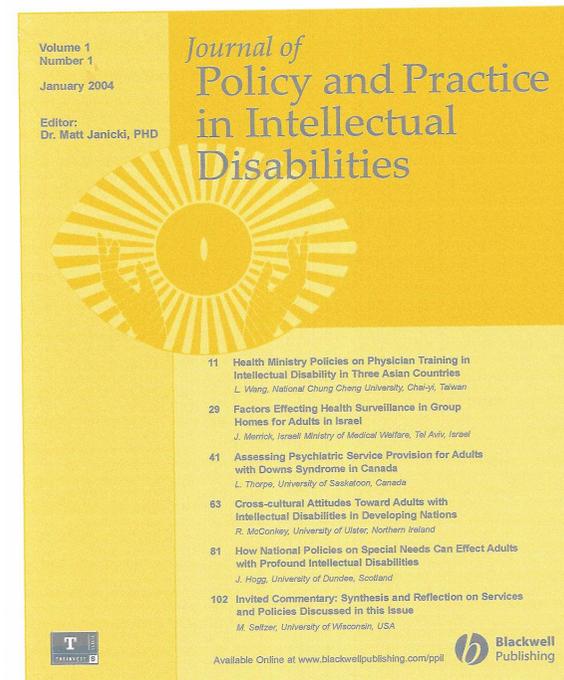

- Neuronal, cellular and molecular defects in Down syndrome and potential therapeutic approaches

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

- Journal of Policy and Practice in Intellectual Disabilities, the Official journal of the International Association for the Scientific Study of Intellectual Disabilities (IASSID)

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

- **EBIFF**: european passport on professional training in early childhood intervention

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

- Telemedicine
 - Contact with families at home
 - Video-conferences network for scientific collaboration
 - For teaching activity

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

- Telemedicine

- Contact with families at home

- For a medical consultation in case of problems, for a selected group of patients
 - For a conclusive report after a day-hospital at the Clinic (Messenger): “The virtual day-hospital”

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

- Telemedicine
 - Video-conferences network for scientific collaboration
 - A new apparatus (Polycom system) for video-conferences is being installed in all the San Raffaele Clinic, laboratories, Research Laboratories and in the collaborative Centers (IBR, New York).

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

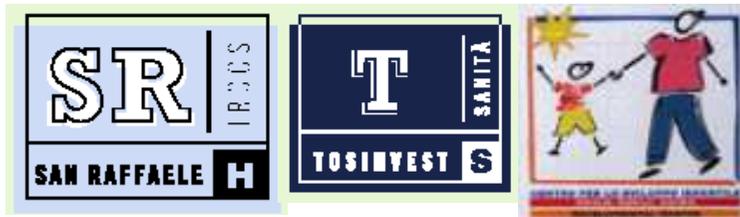

- Telemedicine
 - For teaching activity

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Clinic and research activity of the
Gait Analysis lab at
IRCCS San Raffaele Pisana
In cooperation with the
Dept. of Bioengineering of the
Politecnico di Milano

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

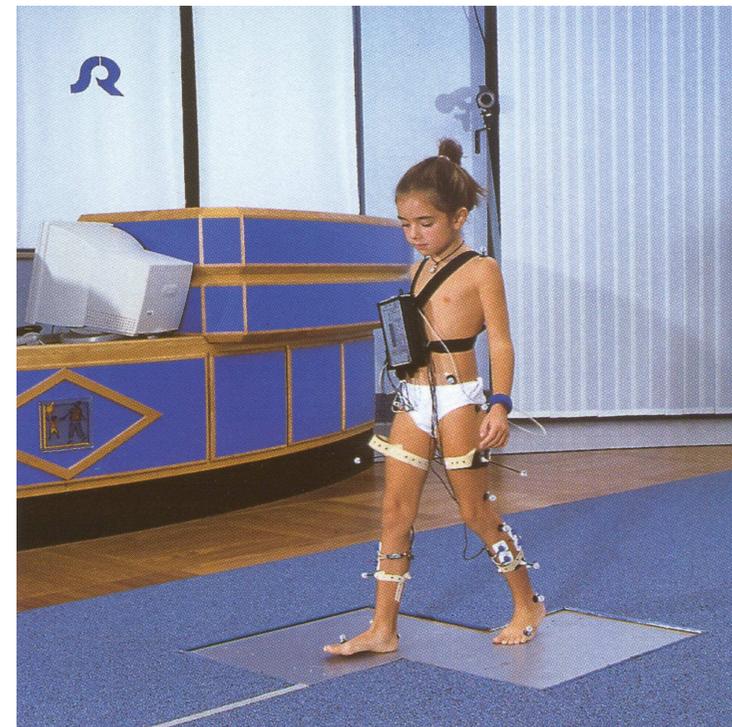

The history

**The Lab in Rome started at 1997
but since 1992 Prof. Albertini was
looking for the possibility to have in his
hospital a Gait Analysis Lab**

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

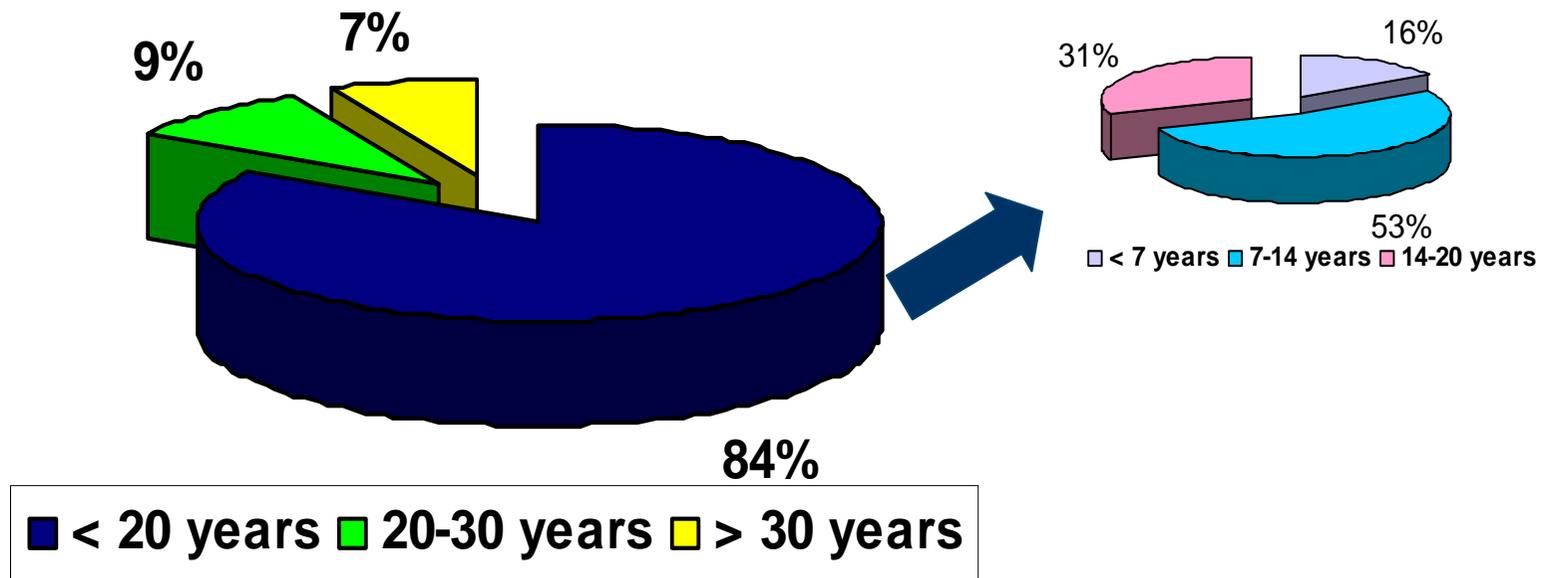

**In 10 years (1997 – 2007)
3125 patients were
evaluated in the Gait lab
of San Raffaele and
studied with the
bioingeneers of
Politecnico of Milan**

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

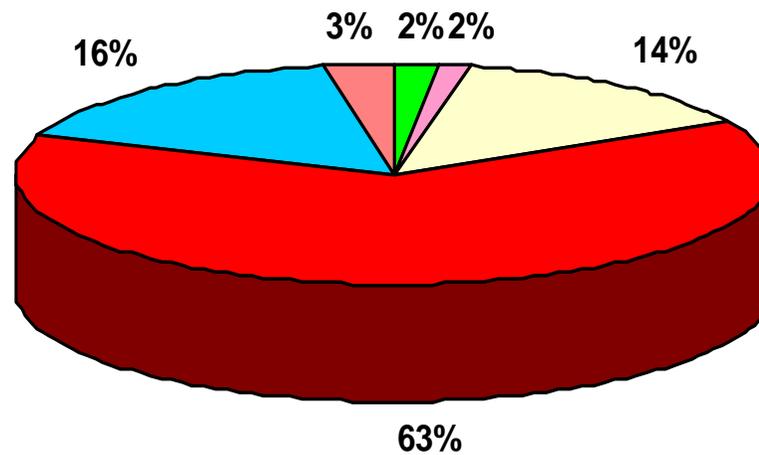

Age of patients

Mainly pediatric patients

Pathologies

■ HEALTHY ■ MYOPATHY ■ OTHER PATH. ■ CP ■ DOWN S. ■ MYELOMENINGOCELIS

Mainly Cerebral Palsy

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

The gait analysis lab in a clinic and research institute:

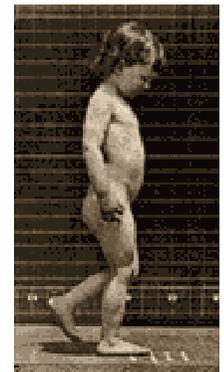

- Clinical use
- Field of research

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

The movement study

Gait is one of the most important human movements

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Before gait analysis

- **Qualitative kinematics**
- **2D analysis of movement**
- **No dynamic information**
- **No muscular activity information**

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Gait analysis offers:

- **Quantitative kinematic evaluation**
- **Quantitative dynamic evaluation**
- **Muscular activity evaluation**

MULTIFACTORIAL QUANTITATIVE ANALYSIS

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Gait Analysis:

**MULTIFACTORIAL QUANTITATIVE ANALYSIS
(kinematics + dynamics + EMG+Video)
of walking movement**

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Technical characteristics of instrumentation

- **Dynamics and EMG relevation**
- **3D**
- **Non-invasivity**
- **Quantitative information**
- **Integrated multifactorial analysis**

The equipment of GAL

- ✓ 12-camera optoelectronic system (ELITE2002, BTS, Italy)
- ✓ 2 force platforms (Kistler, CH)
- ✓ 2-camera video system (BTS, Italy)
- ✓ A new EMG units (16 channel) (Pocket EMG, BTS, Italy)
- ✓ Baropodometric system (FScan system) new software

Acquired in
2006

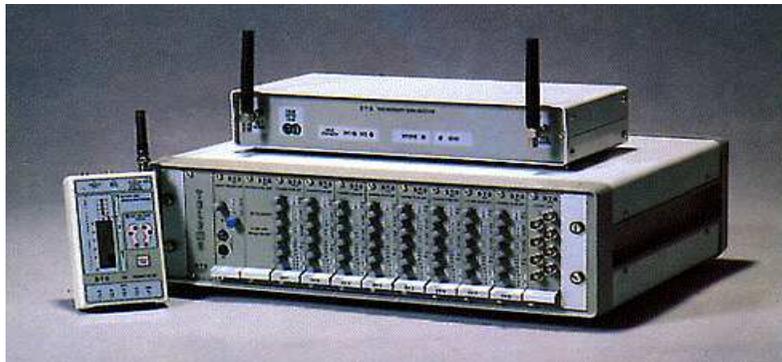

New hardware and software acquisition in order to maintain the lab
at the first level (high technology)

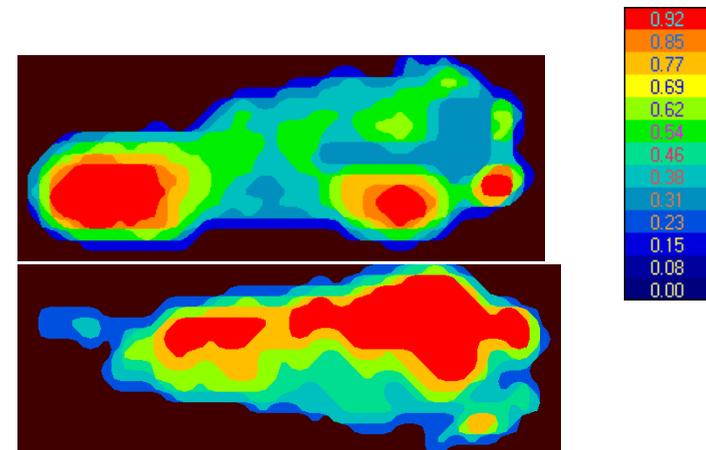

12 TV, 100 HZ (ELITE2002, BTS)

2 PLATFORMS (KISTLER)

**16 CHANNEL TELEMETRIC
EMG (ELITE2002, BTS)**

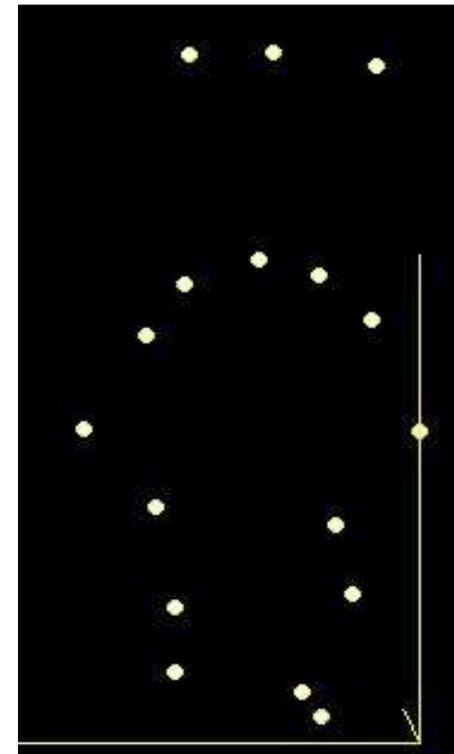

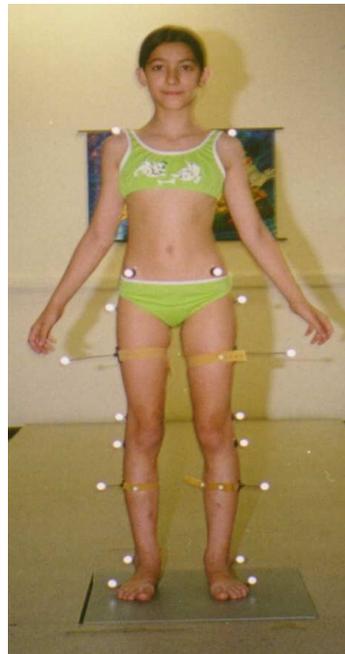

FSCAN AND CLINICAL SEAT

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

The optoelectronic system

For kinematics

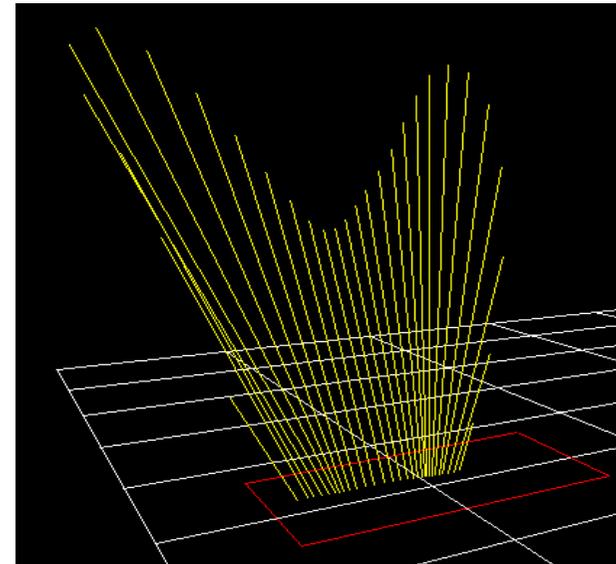

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

The force platform

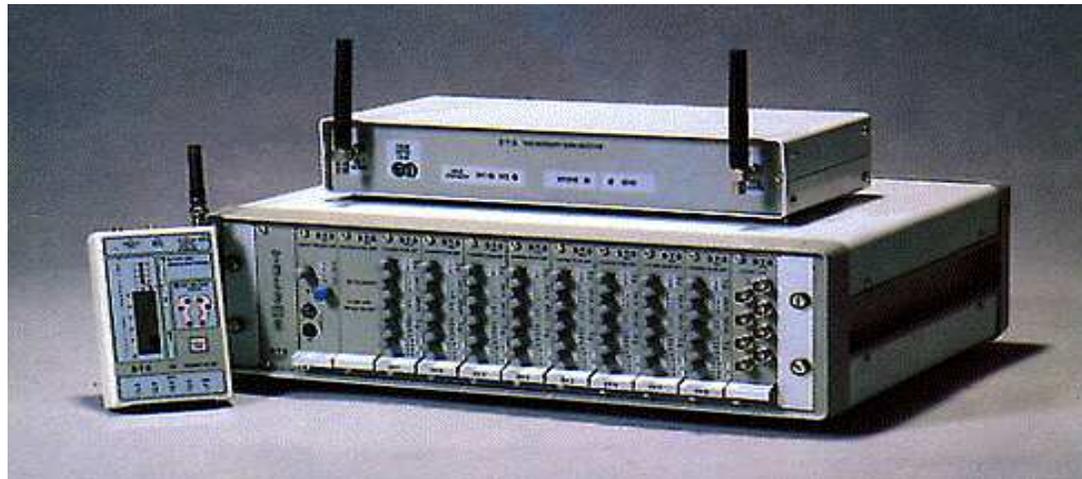

For dynamics

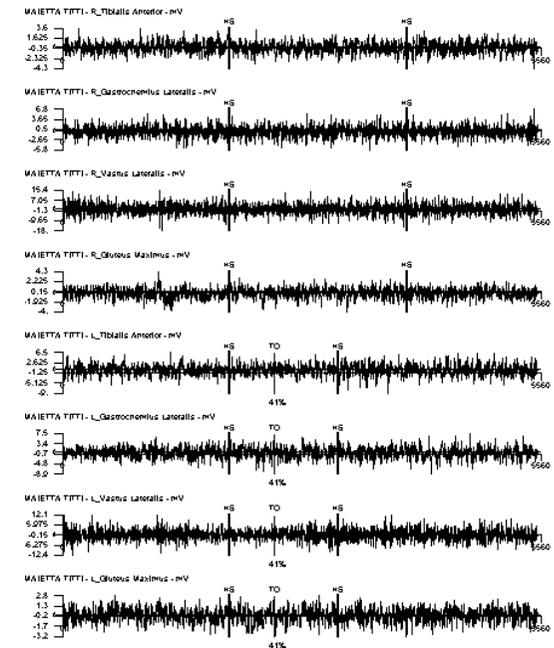

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

The telemetric EMG

For measuring muscular activity

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

The ergospirometer

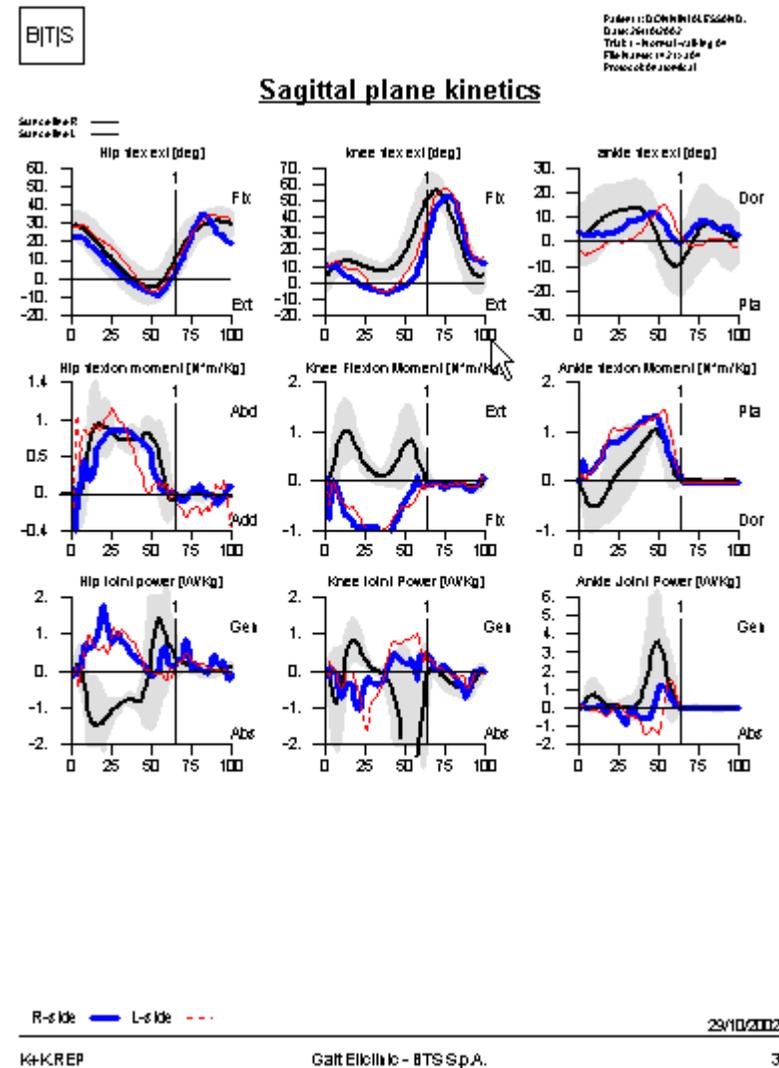

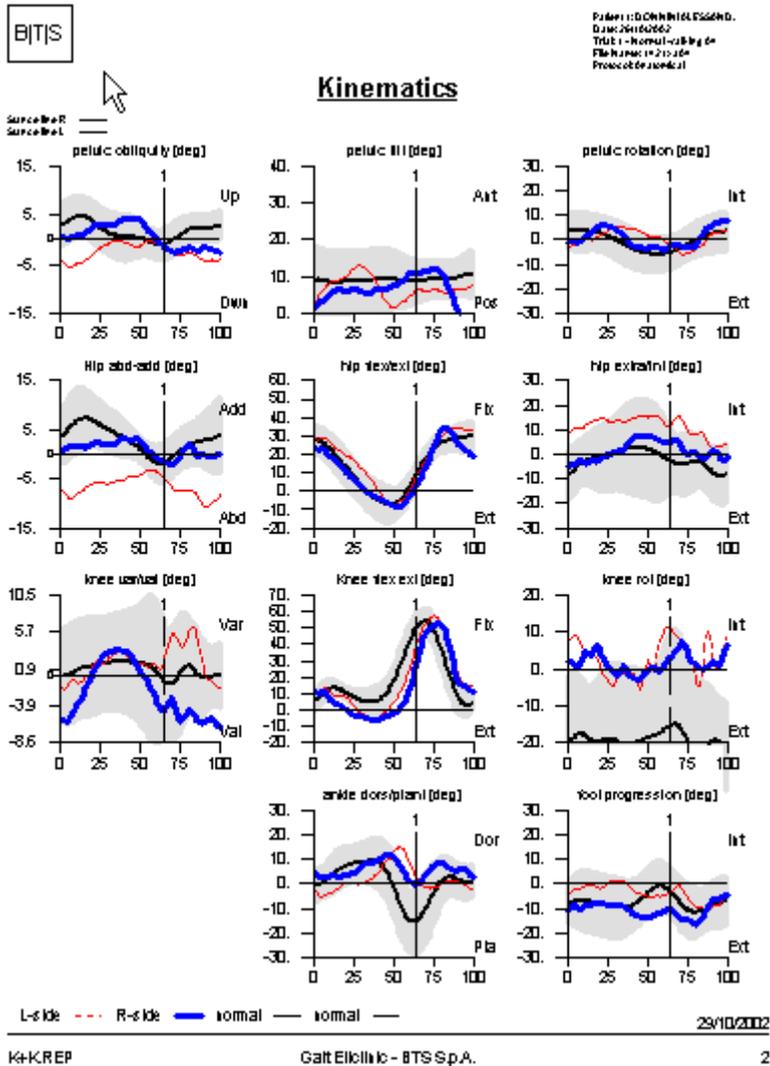

HR

FiO₂

CO₂

For energetic waste

REPORT AND DATA ANALYSIS

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Gait analysis for the Clinical activity

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

Informatic clinical system

Neurological evaluation
Orthopaedic evaluation

(RX, MRI,.....)

Gait Analysis

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

The use of gait analysis has radically changed the treatment of CP children

Before treatment

Better evaluation of
decision making

After treatment

Outcome evaluation

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Gait Analysis for the Research

- **Movement disorders**
- **Myelomeningocele**
- **Posturography**
- **Upper limb movements**
- **Integration of Vestibular and Gait Analysis Lab**
- **Down syndrome**

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Down syndrome

- Most common cromosomal abnormality in humans
- No-disjunction during the maternal meiosis

Down syndrome

- 3 genotypes for Down syndrome:
 - “free” trisomy: about 95%
 - unbalanced translocation: 2-3%
 - mosaicism: 1-2%
- Same phenotype

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Down syndrome

- Clinical features:
 - low birth weight
 - typical phenotype

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Down syndrome

- Phenotype
 - Facies: eyes, mouth, tongue, neck, hands and feet
 - Short limbs, hands and feet
 - Congenital malformations

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Down syndrome

- Congenital malformations
 - Heart defects (about 40%)
 - Gastrointestinal
 - Renal
 - Congenital cataract

Children with Down syndrome

- cardiological controls:
 - congenital/acquired heart defects
- ophthalmological controls
 - eyesight problems
 - nystagmus
 - cataract

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Children with Down syndrome: medical controls

- endocrinological control
- celiac disease

Children with Down syndrome: other controls

- hearing evaluation
- dentistry
- periodic EEG controls
- X-ray – MRI controls:
 - hip in the second year of life
 - cervical spine in second infancy

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Musculo-skeletal abnormalities

- Atlantoaxial instability
- Atlantooccipital instability
- Degenerative skeletal changes
- Abnormalities of the cervic spine
- Hip dislocation
- Patella subluxation
- Foot problems

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Musculo-skeletal abnormalities

- For the diagnosis and treatment:

Combined role of clinical examination, X-ray and neuroimaging, and gait analysis

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Children with Down syndrome: Psychomotor development

Mild psychomotor delay

Autonomic walking: 18 – 24 months

Speech problems

Mild-moderate intellectual disability

GAIT ANALYSIS IN ADULT AGE Santiago, 13 march 2008

Maturing persons with Down syndrome:

- Physical maturation
- Sexual development
- Medical concerns
- Psychiatric – behavioral issues
- Educational aspects
- Social maturation
- Recreational activities

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

TRAMA project 10 - 14 march 2007:

13 march clinical case

Down syndrome

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Renata C.

Date of birth: 28.09.1979

Maternal age at birth: 45 yrs

Birth weight: 2.500 g

Gestational age: 41 weeks

Normal perinatal period

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Renata C.

Autonomic walking: 24 months

Very good autonomy in daily life

IQ: 50

GAIT ANALYSIS IN ADULT AGE
Santiago, 13 march 2008

Renata C.

No congenital malformation

No celiac disease

No thyroid problems

Overweight

Renata C.

Cervical X ray

- static study: mild spodilo-arthrosys
C3 – C4 and C4-C5
- dynamic study: normal

GAIT ANALYSIS IN ADULT AGE

Santiago, 13 march 2008

Renata C.

Orthopedic evaluation

- No relevant clinical problems
- Mild lumbar hyper-lordosis

GAIT ANALYSIS IN ADULT AGE 2008
